In this book efforts were made to compile and categorize scientifically the institutional level biodiversity. The book contains a comprehensive review covering the diversity and distribution patterns of biodiversity and availability of natural resources compiled in 27 chapters. This information will provide a unique opportunity for urban biodiversity research, conservation and education, as Well as connecting the public with nature through citizen science.

This book Will guide students and researchers about living biodiversity on campuses, such as plants, insects, microorganism etc., which have been recorded, protected and studied for educational and academic purposes. Biodiversity infonnation of this book will make a valuable contribution and raise awareness on importance of biodiversity for agriculture and conserve natural resources. This information will definitely be useful for natural resources management from the point of View of its sustainable use at institutional level and replicating the same at macro level for the benefit of commons.
