The present book Flora of South Central Rajasthan deals with the floral resources of the area of Ajmer, Rajsamand, Bhilwara and Chtorgarh districts which is represented by the admixture of western dry and southern wet zone elements of Rajasthan. 686 species belonging to 416 genera and 117 families have been presented. Besides providing an upto date nomenclature and full synonymy of all the taxa the elaborate description of species provided is based on personal observations of the authors. Special attention has been given to the information on nomenclature, identification and critical evaluation of species. Ecological notes along with phenology and ethnobotanical importance have been incorporated to almost all the taxa. The distributions of taxa in the world and in India have also been provided for each taxon. 187 good quality illustrations and more than 341 coloured photographs have added to the value of the book. Moreover, 7 new taxa have been added to the flora of Rajasthan. It is hoped that this book will certainly serve as an excellent reference material and practical guide for teachers, researchers, students and environmentalists as well as for conservation of biodiversity and sustainable utilization of plant resources.

Table of Contents

1. Introduction
2. Physiography
 - 2.1 Climate
 - 2.2. Geology
3. Previous Work and Present Study
4. Material and Methods
5. Floristic Survey
6. Ethnobotanical Survey
7. Vegetation
8. Biotic Factors
- 9 Biological Spectrum
10. Economic and Medicinal Value of Plants
11. Key to the Families
12. Enumeration of the Species
13. References
14. Index of Families, Genera and Species
15. Index of Local Names
