

Laboratory Manual of Microbiology, Biochemistry and Molecular Biology

Jyoti Saxena, **Mamta Baunthiyal** & **Indu Ravi**

ISBN	: 9788172337780	Book Format	: Book
Language	: English	Binding	: Paper Back
Imprint	: Scientific Publishers	Edition	: 1
Pages	: 380	© Year	: 2015
Weight	: 580 Gms	Trim Size	: 6.50 X 9.50

Print Book : ₹370.00

Blurb

Though many practical books are available in the market but this Laboratory Manual of Microbiology, Biochemistry and Molecular Biology is an unique combination of protocols that covers maximum (about 80%) of the practicals of various Indian universities for UG and PG courses in Bioscience, Biotechnology, Microbiology, Biochemistry and Biochemical Engineering.

Foreword

Aditya Shastri

Vice Chancellor Banasthali University Banasthali

Table of Contents

I. Introduction

- i. Laboratory Etiquette and Safety
- ii. Good Laboratory Practices
- iii. Maintenance of Distillation Apparatus
- iv. Washing of Glassware
- v. Dry Sterilization
- vi. Handling of Pipette
- vii. Molecular, Empirical and Formula Weight
- viii. Planning a Solution of a Particular Molarity
- ix. Making Solutions from Hydrated Compounds
- x. Measurement of Liquids with Normality / Molarity
- xi. Numbers found on Chemical Bottles
- xii. Accuracy and Calibration
- xiii. Buffers

II. Instruments: Principle and Precautions

- i. Weighing Balance
- ii. Spectrophotometer
- iii. Laminar Flow
- iv. Autoclave
- v. Centrifuge
- vi. pH meter
- vii. Incubator
- viii. Hot air oven
- ix. Compound microscope

III. EXPERIMENTS

PART 1 MICROBIOLOGY

- 1.1 Micrometry and Measurement of Microorganisms
 - 1.1.1. Calibration of microscope by using ocular and stage micrometer
 - 1.1.2. Measurement of size of microorganism / spore
- 1.2 Preparation of Culture Media
 - 1.2.1. Liquid culture medium (broth)
 - 1.2.2. Solid medium

1.2.2. Solid medium

1.2.3. Agar plates and agar slants

1.2.4. Selective and differential media

1.2.4.1. Eosin Methylene Blue (EMB) Method

1.2.4.2. Mannitol Salt Agar

1.2.4.3. Pikovskaya Agar

1.3 Aseptic Methods

1.3.1. Physical methods of sterilization

1.3.2. Chemical methods of sterilization

1.3.3. Gaseous sterilization

1.4 Cultivation Techniques

1.4.1. Streak plate method

1.4.2. Pour plate technique

1.4.3. Spread plate technique

1.4.4. Serial dilution technique

1.5 Preservation and Maintenance of Cultures

1.5.1. Maintenance by sub-culturing

1.5.2. To prepare agar slants with mineral oil

1.5.3. Storage in soil

1.5.4. To store the cultures in liquid nitrogen

1.5.5. To store the cultures at -70°C

1.5.6. To preserve the cultures by lyophilization (Freeze drying)

1.6 Staining Techniques

1.6.1. Preparation of bacterial smear and fixation

1.6.2. Simple staining of bacteria

1.6.3. Negative staining of bacteria

1.6.4. Gram's staining of bacteria

1.6.5. Acid Fast staining

1.6.6. Endospore staining

1.6.6.1. By malachite green

1.6.6.2. Dorner's method

1.6.7. Capsule staining to detect the capsule or slime layer in bacteria

1.6.8. Flagella staining

1.6.8.1. Lee's method

1.6.8.2. Leifson's method

1.6.9. To test viability of bacteria by staining.

1.6.10. Staining of fungi

1.6.11. Staining of Arbuscular Mycorrhiza (AM)

1.7 Isolation and Enumeration of Microbes

1.7.1. Isolation and enumeration of fungi from soil

1.7.1.1. Isolation of fungi by dilution plate method

1.7.1.2. Isolation of fungi by Warcup method

1.7.2. Isolation of seed microflora

1.7.2.1. Agar plate method

1.7.2.2. Blotter method

1.7.3. Isolation of aeromycoflora

1.7.4. Isolation of vesicular arbuscular mycorrhazia (VAM) spores from the soil

1.7.4.1. Wet- Sieving method

1.7.4.2. Floatation method

1.7.5. Isolation and enumeration of microorganisms from rhizosphere

1.7.6. Isolation of microorganisms from rhizoplane

1.7.7. Isolation of protozoa from soil

1.7.8. Isolation of cyanobacteria

1.7.9. Isolation of aquatic fungi by baiting method

1.7.10. Isolation of yeast

1.7.11. Isolation of rhizobia from the root nodules

1.7.12. Isolation and cultivation of anaerobic bacteria

1.7.12.1. Candle Jar method

1.7.12.2. Gaspak Anaerobic Jar method

1.7.13. Analysis and enumeration of bacteria in milk

1.7.14. Presumptive test for coliforms to check the quality of milk

- 1.7.15. Microbiological examination of cheese
- 1.7.16. Microbiological examination of butter
- 1.8 Counting of Cells/ Spores
 - 1.8.1. Measurement of cells/ spores by counting chamber
 - 1.8.2. Counting of cells by serial dilution technique
 - 1.8.3. Counting of bacterial population spectrophotometrically
- 1.9 Microbial Growth
 - 1.9.1. Determination of bacterial growth by spectrophotometric method
 - 1.9.2. Measurement of fungal growth by colony diameter
 - 1.9.3. Measurement of fungal growth by dry weight of mycelium
 - 1.9.4. Estimation of biomass
 - 1.9.4.1. Dry cell weight estimation
 - 1.9.4.2. Packed cell volume determination
 - 1.9.5. Effect of temperature on growth
 - 1.9.6. Effect of pH on growth
 - 1.9.7. Determination of antibiotic sensitivity by disc method
- 1.10 Fermentation Technology
 - 1.10.1. Estimation of lactic acid
 - 1.10.2. Estimation of citric acid production by *Aspergillus niger*
 - 1.10.3. Bioconversion of tannic acid to gallic acid
 - 1.10.4. Determination of alcohol production in the fermented broth
 - 1.10.5. Alpha amylase biosynthesis and measurement of its activity
- 1.11 Mushroom Cultivation
 - 1.11.1. Production of spawn for white button mushroom (*Agaricus bisporus*)
 - 1.11.2. Cultivation of white button mushroom

PART 2 BIOCHEMISTRY

- 2.1. Carbohydrates
 - 2.1.1. Qualitative test for Carbohydrates
 - 2.1.1.1. Molisch's Test
 - 2.1.1.2. Iodine Test
 - 2.1.1.3. Barfoed's Test
 - 2.1.1.4. Seliwanoff's Test
 - 2.1.1.5. Fehling's Test
 - 2.1.1.6. Benedict's Test
 - 2.1.1.7. Bial's Test
 - 2.1.1.8. Osazone Test
 - 2.1.1.9. Test for non reducing sugars
 - 2.1.2. Quantitative test for carbohydrates
 - 2.1.2.1. Determination of total carbohydrate by Anthrone reagent
 - 2.1.2.2. Determination of reducing sugar by Nelson-Somogyi method
 - 2.1.2.3. Determination of cellulose
- 2.2. Amino Acids and Proteins
 - 2.2.1. Color reaction of proteins and amino acids
 - 2.2.2. Titration curve of amino acids
 - 2.2.3. Protein assay methods
 - 2.2.3.1. The I_{max} for proteins and amino acids
 - 2.2.3.2. Determination of molar absorbance coefficient (ϵ) of L-Tyrosine
 - 2.2.3.3. Lowry's method of protein assay
 - 2.2.3.4. Bradford protein assay
 - 2.2.3.5. Bicinchoninic acid protein assay
 - 2.2.3.6. Biuret assay
 - 2.2.4. Isolation of casein from milk
 - 2.2.5. Ammonium sulphate fractionation of proteins
- 2.3. Enzymes
 - 2.3.1. Extraction and purification of enzymes: General strategies
 - 2.3.2. Expression of enzyme activity
 - 2.3.2.1. To study the effect of pH and temperature on activity of acid phosphatase
 - 2.3.2.1.1. To determine the activity of acid phosphatase

- 2.3.2.1.2. To study the effect of pH on activity of acid phosphatase
- 2.3.2.1.3. To study the effect of temperature on activity of acid phosphatase
- 2.3.2.2. Purification of acid phosphatase from raw wheat germ
- 2.3.2.3. To determine the K_m and V_{max} value of acid phosphatase
- 2.3.3. Extraction and assay of enzymes
 - 2.3.3.1. Malate dehydrogenase
 - 2.3.3.2. Peroxidase
 - 2.3.3.3. Polyphenol oxidase
 - 2.3.3.4. Salivary Amylase
 - 2.3.3.5. Papain
- 2.3.4. Immobilization of an enzyme
- 2.4. Lipids
 - 2.4.1. Qualitative test for lipids
 - 2.4.1.1. Solubility test for lipids
 - 2.4.1.2. Grease spot test
 - 2.4.1.3. Acrolein test for glycerol
 - 2.4.1.4. Liebermann-Burchard test for cholesterol
 - 2.4.2. Determination of free fatty acids
 - 2.4.3. Determination of Iodine number
 - 2.4.4. Determination of Saponification value
 - 2.4.5. Estimation of serum cholesterol (total)
- 2.5. Nucleic acids
 - 2.5.1. Determination of I_{max} of nucleic acids
 - 2.5.2. Determination of DNA by Diphenylamine method
 - 2.5.3. Determination of RNA by Orcinol method
- 2.6. Cell organelles
 - 2.6.1. Isolation of mitochondria
 - 2.6.1.1. Isolation of mitochondria from plant leaves
 - 2.6.1.2. Isolation mitochondria from rat liver
 - 2.6.2. Isolation of chloroplast from plant leaves
- 2.7. Plant Pigments and Phenolics
 - 2.7.1. Estimation of Chlorophyll
 - 2.7.2. Estimation of carotene
 - 2.7.3. Estimation of lycopene
 - 2.7.4. Estimation of Total phenol by Folin-Ciocalteu method
- 2.8. Vitamins
 - 2.8.1. Estimation of Thiamine
 - 2.8.2. Estimation of Ascorbic acid in lemon juice
 - 2.8.3. Estimation of Riboflavin
 - 2.8.4. Estimation of Vitamin A
- 2.9. Biochemical Separation Techniques
 - 2.9.1. Paper chromatography
 - 2.9.2. Thin layer chromatography
 - 2.9.3. Gel-filtration chromatography
 - 2.9.4. Polyacrylamide sodium dodesyl sulphate gel electrophoresis (SDS-PAGE)
 - 2.9.5. Silver staining
 - 2.9.6. Isoelectrofocusing.

PART 3 MOLECULAR BIOLOGY

- 3.1. Isolation of Nucleic acids
 - 3.1.1. Isolation of DNA
 - 3.1.1.1. Isolation of E. coli plasmid DNA
 - 3.1.1.2. Isolation of E. coli genomic DNA
 - 3.1.1.3. Isolation of phage DNA
 - 3.1.1.4. Isolation of plant DNA (CTAB method)
 - 3.1.1.5. Isolation of mammalian DNA
 - 3.1.1.5.1. Isolation of DNA from mammalian tissue
 - 3.1.1.5.2. Isolation of DNA from blood cells
 - 3.1.1.6. Isolation of chloroplast DNA
 - 3.1.1.7. Isolation of mitochondrial DNA
 - 3.1.1.8. Agarose gel electrophoresis

3.1.2. Isolation of RNA

3.1.2.1. Isolation of total RNA

3.1.2.2. Isolation of messenger RNA

3.1.2.3. Agarose gel electrophoresis of RNA

3.1.2.4. Quantification of DNA/RNA

3.1.2.5. Determination of DNA quality

3.2. Denaturation and Renaturation of DNA

3.2.1. Determination of melting temperature (T_m value) of DNA

3.2.2. Determination of GC/AT content of DNA

3.3. Restriction Digestion

3.3.1. Restriction digestion of DNA.

3.3.2. Agarose gel electrophoresis of digested DNA samples.

3.4. Polymerase chain Reaction (PCR)

3.4.1. DNA amplification by PCR.

3.4.2. RAPD analysis of Plant DNA.

3.4.3. PCR amplification of 16s ribosomal RNA.

3.5. Blotting Techniques and Hybridization

3.5.1. Southern blotting and hybridization

3.5.2. Northern blotting and hybridization

3.5.3 Western blotting and hybridization

3.6. Ligation and Transformation of DNA

3.6.1. Ligation

3.6.2. Preparation of competent E. coli cells

3.6.3. Transformation of E. coli cells

3.6.4. Transformation of plant cells using *Agrobacterium tumefaciens*

3.6.5. Isolation of plant protoplasts.

3.7. Selection of Recombinant Cells

3.7.1. Selection by antibiotic resistance

3.7.2. Lac Z' gene selection

3.7.3. Gus assay
