

Ocean and Coastal Ecology (21st Century Biology and Agriculture: Textbook Series)

K. Kathiresan & Series Editor: Anantanarayanan Raman

ISBN	: 9788172338916	Book Format	: Book
E-ISBN	: 9789386237255	Binding	: Paper Back
Language	: English	Edition	: 1
Imprint	: Scientific Publishers	© Year	: 2015
Pages	: 384	Trim Size	: 5.15 X 8.15
Weight	: 435 Gms		

Print Book : ~~₹450.00~~ **₹405.00** 10%Off

Individual E Book : **₹455.00**

Institutional E Book : **Price available on request**

Blurb

This book entitled Ocean and Coastal Ecology under the series of 21st Century Biology and Agriculture has 10 chapters aimed to provide a clear understanding on scientific principles of marine ecology in order to manage the marine environment and its bio-resources in view of deterioration of marine ecosystems, natural calamities and climate change. This book would be of immense help to students, scholars and all others interested in marine ecology.

Table of Contents

1. Introduction to Marine Ecology

Ecology and marine ecology

Importance of marine ecology

Conservation of marine environment

Conservation of marine biodiversity

Conservation of marine bioresources

Responsibility of marine ecologists

Uniqueness of marine environment

Uniqueness of marine organisms

Marine Environment: Divisions

Marine organisms: Major groups

2. Environmental Marine Ecology

Physical factors

Temperature

Light

Salinity

Pressure

Oceanic currents

Tides

Waves

Substratum

Climate change

Chemical factors

Oxygen

Carbon dioxides and carbonates

Hydrogen sulphide

Hydrogen ion concentration (pH)

Inorganic salts

Dissolved organic matter

3. Ocean Ecology

Pelagic environment of the ocean

Epipelagic zone

Mesopelagic zone

Bathypelagic zone

Abyssalpelagic zone

Hadalpelagic zone

Marine organisms of the pelagic zone of the ocean

Adaptations of pelagic organisms of the ocean

Benthic environment of the ocean

Bathyal zone

Abyssal zone

Hadal zone

Hydrothermal vents and cold-seep communities

Adaptations

Significance of hydrothermal vents

4. Coastal Ecology

Pelagic environment of the coast

Benthic environment of the coast

Intertidal zone (Littoral zone)

Rocky shores

Sandy shores

Muddy shores

Continental shelf or sub-tidal environment of coast

Environmental conditions

Unvegetated sedimentary environments

Rocky sub-tidal communities

Kelp beds or forests

Seagrass communities

5. Ecology of Coral-Reef Ecosystem

Importance of corals

Coral distribution

Types of coral reefs

Ecology of coral reefs

Biology of coral reefs

Organisms associated with reefs

Species interactions and ecology of reefs

Ecology of reef fishes

6. Ecology of Estuary

Definition of estuary

Types of estuaries

Coastal plain estuaries

Tectonic estuaries

Macrotidal estuaries

Semi-enclosed bay or lagoon estuaries

Fjord-type estuaries

Classification of estuaries

Positive estuary or salt-wedge estuary

Negative estuary or evaporate estuary

Neutral estuary

Environmental features of estuaries

Physical environmental features

Chemical environmental features

Estuarine organisms

Adaptation of estuarine organisms

Morphological adaptations

Physiological adaptations

Behavioural Adaptations

Estuarine productivity

Estuarine food webs

Salt marshes

Environmental characteristics

Development of salt marshes

Zonation of salt marshes

Ecological services

Productivity of salt marshes

Food webs

7. Ecology of Mangroves

Distribution of mangroves

Old and new world mangroves

Types of coastal settings

Types of mangrove forests

Mangrove ecology

Tidal amplitude and topography

Temperature

Salinity

Rainfall and supply of freshwater

Substrate characteristics

Mangrove eco-biology

Morphological adaptations

Anatomical adaptations

Physiological adaptations

Adaptation for dispersal and establishment

Mangrove ecological functions

Screening the solar UV-B radiation

Reducing the 'green house' gas effects

Mitigating the fury of cyclones

Mitigating the fury of giant waves

Controlling the flood

Prevention of the coastal erosion

Trapping the sediments

Deepening the creeks

Trapping and recycling of nutrients

Supporting the fishes and wildlife populations

Supporting food web in other coastal ecosystems

Protecting other coastal ecosystems

Uses of mangroves

Timber and firewood

Logs for multiple uses

Wood-chip industry

Foliage as animal feed

Decoction of bark for leather industry

Natural beehives and extraction of honey

Fisheries and livelihood

Pharmaceuticals

Novel values of mangroves

8. Functional Marine Ecology

Marine primary production

Primary production through photosynthesis

Primary production through chemosynthesis

Carbon sequestration in marine environment

Marine detritivory and herbivory

Sediment and deposit feeders

Filter and suspension feeders

Phytoplankton grazers

Surface algal grazing

Predation, parasitism and pathogenesis

Predation

Parasitism

Pathogens

Marine fouling and boring

Marine fouling

Marine boring

Commensalism and symbiosis

Commensalism

Symbiosis

Competition and succession

Competition

Succession

Dispersal and settlement

Dispersal

Settlement

Marine food chains

Pelagic food chains

Benthic food chains

9. Threats to Marine Environment

Short term and sudden threats

Long term and continuous threats

Over-exploitation of fishes

Industrial pollution

Sewage pollution

Land reclamation

Invasive alien species

Climate change

Threats to coral reefs

Storms and waves

Out-breaks of the coral-eating sea star (Crown-of-Thorns Star Fish)

El Nino

Ocean acidification

Human activities

Threats to mangroves

Causes of mangrove degradation

Causes of mangrove destruction

Threats to estuaries

Land reclamation and urbanization

Sewage disposal

Industrial effluent disposal

Oil waste

Over-exploitation

Threats to seagrass ecosystem

Threats to salt-marsh ecosystem

Threats to coastal sand dunes

10. Conservation and Management of Marine Environment

Regulatory approach for marine management

Marine protected areas

Marine fisheries management policies

Coastal management policies

International co-operation

Participatory approach for marine management

Types of stakeholders

Types of participation

Strategies for participation

Civil society awareness

Training and capacity building

Coastal rehabilitation

Coastal livelihood

Income generation and financial sustainability

Participatory monitoring

Research and development in ocean management

Management of coral reefs

Protection of coral reefs

Monitoring of coral reefs

Research studies in coral reefs

Capacity building and awareness creation

Restoration and rehabilitation of coral reefs

Conservation and management of mangrove ecosystems

Silviculture management

Legal protection

MPAs

International protection

Restoration and afforestation

Management of coral–reef resilience and resistance to climate change (coral bleaching)

Resistance factors

Resilience factors

Tools for enhancing coral–reef resilience

Strategies for enhancing coral–reef resilience

Management of mangroves for resilience to climate change (sea–level rise)

Impacts of climate change on mangroves

Strategies to mitigate climate change effects
