This Textbook deals with Biotechnological tools for plants. It is an attempt to provide the latest information in a comprehensible manner for the UG/PG students of Biotechnology, Botany, and molecular- biology/microbiology. The book is presented as a Text Book to deal with the most recent and relevant scientific advancements in the field of Plant Biotechnology- divided into four units and thirty chapters, because of the needs of the syllabi for students of Biotechnology/Botany, dealing with Introduction to Plant Biotechnology, Plant Tissue Culture, Transgenic Plants or Genetic Modification Technology, and Industrial and Agricultural Applications as well as Annexures I and II covering practical ELISA and PCR. The chapters are written impeccably for providing up-to-date knowledge of the subject to the students. The text is presented in a manner that enhances the subject's readability and also makes it interesting. Different issues and levels of difficulty in the subject have been dealt very carefully for the target audience in mind i.e. as an effective teaching tool by compiling it in a systematic way that can be learned efficiently, including many aids like Photographs, Figures, Tables, etc to make the subject interesting and learning to be quite easy and enjoyable.
