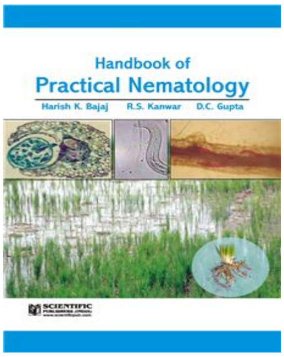
Handbook of Practical Nematology



H.K. Bajaj , R.S. Kanwar & D.C. Gupta

ISBN	: 9788172336806	Book Format	: Book
E-ISBN	: 9789387869189	Binding	: Hard Bound
Language	: English	Edition	: 1
Imprint	: Scientific Publishers	© Year	: 2018
Pages	: 150	Trim Size	: 6.5 x 9.75
Weight	: 480 Gms		

Print Book : **₹1,450.00**

Individual E Book : **₹1,560.00**

Institutional E Book : **Price available on request**

Blurb

Nematology is the discipline of science that deals with the study of nematodes or roundworms. Current requirements of practical nematological work and unavailability of expertise and studies in this field, indicates a dire need to encourage the likes of this book on the neglected groups of organisms. The authors, in the present book have attempted to cover the practical aspects of Nematology for U.G. and P.G. students, teachers and research workers. Rather than enlisting numerous methods adopted by various workers, emphasis is given to most commonly used techniques for every excercise. Additionally, to gain in depth knowledge on a particular topic, further readings have been suggested at the end of each exercise. Illustrations have also been given that will help the readers in identification of common nematode species and disease symptoms caused by them.

Table of Contents

Post embryonic development
Variations with other major nematode groups

Exercise 9. Histopathology of nematode infected roots - P.P.S. Baghel

Exercise 10. Pathogenicity trials for plant parasitic nematodes - K.R. Dabur

Exercise 11. Major nematode pests of important crops in India : Morphology, symptomatology and control - Harish K. Bajaj & R.S. Kanwar
Anguina tritici
Aphelenchoides species
Ditylenchus angustus
Heterodera and Globodera species
Meloidogyne species
Rotylenchulus reniformis
Tylenchulus semipenetrans
Radopholus similis
Hirschmanniella species
Pratylenchus species

Exercise 12. Crop loss assessment due to nematodes - R.S. Kanwar & Harish K. Bajaj
Estimation of avoidable losses in an infested
Estimation of losses in a geographical area

Exercise 13. In vitro screening of chemicals against nematodes - I.J. Paruthi
Mortality Test
Hatching Test

Exercise 14. Testing of chemicals against plant parasitic nematodes by different methods in pots and field - R.K. Jain
Evaluation of chemicals by seed soaking method for the control of root-knot nematode
Efficacy of chemicals used as seed dressing method for the control of root-knot nematode
Evaluation of chemicals for the control of root knot nematode through bare root-dip method
Evaluation of granular nematicides for the control of root-knot nematode as soil application / nursery bed treatment

Exercise 15. Testing phytotherapeutic substances for nematode control - R.S. Kanwar
Evaluation of plant extracts for their toxicity against root-knot nematode
Evaluation of efficacy of plant parts for root-knot nematode control

Exercise 16. Screening of germpalsm for resistance against important phytoparasitic nematodes - R.K. Jain
Meloidogyne species on vegetables and pulse crops
Rotylenchulus reniformis on vegetable and pulse crops
Anguina tritici on wheat
Heterodera avenae on wheat and barley
Heterodera cajani on pulse crops
Tylenchulus semipenetrans on citrus
Radopholus similis on coconut
Ditylenchus angustus on rice

Exercise 17. Field trials on biocontrol agents for the management of phytonematodes - R.K. Walia
Paecilomyces lilacinus
Pasteuria penetrans

Exercise 18. Crop rotation trials for management of plant parasitic nematodes - R.S. Kanwar

Exercise 19. In vitro culturing of plant parasitic and fungivorus nematodes - R. S. Kanwar
In vitro culturing of plant parasitic nematodes
Callus tissue technique
Carrot disc technique
Excised root technique
In vitro culturing of fungal feeding nematodes

Exercise 20. Isolation and culturing of entomopathogenic nematodes - Harish K. Bajaj
Isolation and mass rearing of EPNs in vivo
Collection of adults of EPNs and studies on their life cycles
